

ABSTRACT OF THE DISCLOSURE

In a composite audio-video apparatus, when a user operates a remote controller and sends a DVD reproducing command, a remote control receiving section receives the DVD reproducing command
5 and outputs it into a VCR control section and DVD control section. The DVD control section controls a DVD reproduce section to reproduce a DVD, and the DVD control section sends a direction signal to the VCR control section. When the VCR control section receives the direction signal, the VCR control section sends
10 an image changeover signal to an image output section, and the image output section is set its image inputting source to the DVD reproduce section. The image reproduced by the DVD reproduce section is outputted to a television set via the image output section.
